Free Memory Screenings During the Month of May!

For available dates and times, please see our branch schedule on the reverse side of this flyer.

What is a memory screening?

- A simple, safe and quick evaluation that checks memory and other thinking skills.
- Takes approximately 10 minutes.
- It is not a diagnosis, but can indicate whether additional follow-up with a healthcare professional is needed.

Why should I be screened?

Vitamin deficiencies, thyroid problems, stress and lack of sleep can cause memory problems. Other memory problems might result from causes that are not currently reversible, such as Alzheimer's disease. The earlier the diagnosis, the easier it is to treat or slow down the condition causing the memory problems.

Contact AFA to learn more about Memory Screenings by calling 866-232-8484 or visiting www.alzfdn.org

The First National Bank of Long Island or its representatives/agents via this program do not provide medical advice, diagnosis or treatment. Any medical advice or follow-up can be provided by a licensed healthcare professional.

AFA's National Memory Screening Program is made possible with a grant from the Edward N. and Della L. Thome Memorial Foundation
